Yaw Minor Release 2 Notes
NM-ASR
September 2025

The following features are included in the most recent release of Kite® Educator Portal, Kite® Student Portal, and Kite® Content Portal.

New features:

➢ **Educator Portal MFA Trusted Device** – Multifactor Authentication has been updated to allow EP users to 'Remember this device for 30 days '. This update decreases the frequency of entering the MFA code on a trusted device and specific browser. When the browser cookies are cleared or if the browser is set to clear cookies each time the window is closed, EP will not be able to remember the device, and you will need to enter an MFA code.

➢ **Display Remaining Character and Set Character Limit** – The character limit and the available remaining characters can be displayed on extended response items, when the configuration is set at item creation.

Updated features:

➢ **Updated Scoring Portal Kite Technologies** – The Kite Scoring Portal application technologies were updated to meet or exceed industry standards for security. The technology updates keep Scoring Portal data secure and stable.

➢ **Enhancements to Restricted Special Circumstance Code Extract** – The Restricted Special Circumstance Code data extract has been updated to include information on the level the SC Code was applied at. Additionally, the header names in this extract file are updated to remain consistent with the other extracts in Educator Portal. The column order of this extract remains the same.
